

A unit of Candour Solutions

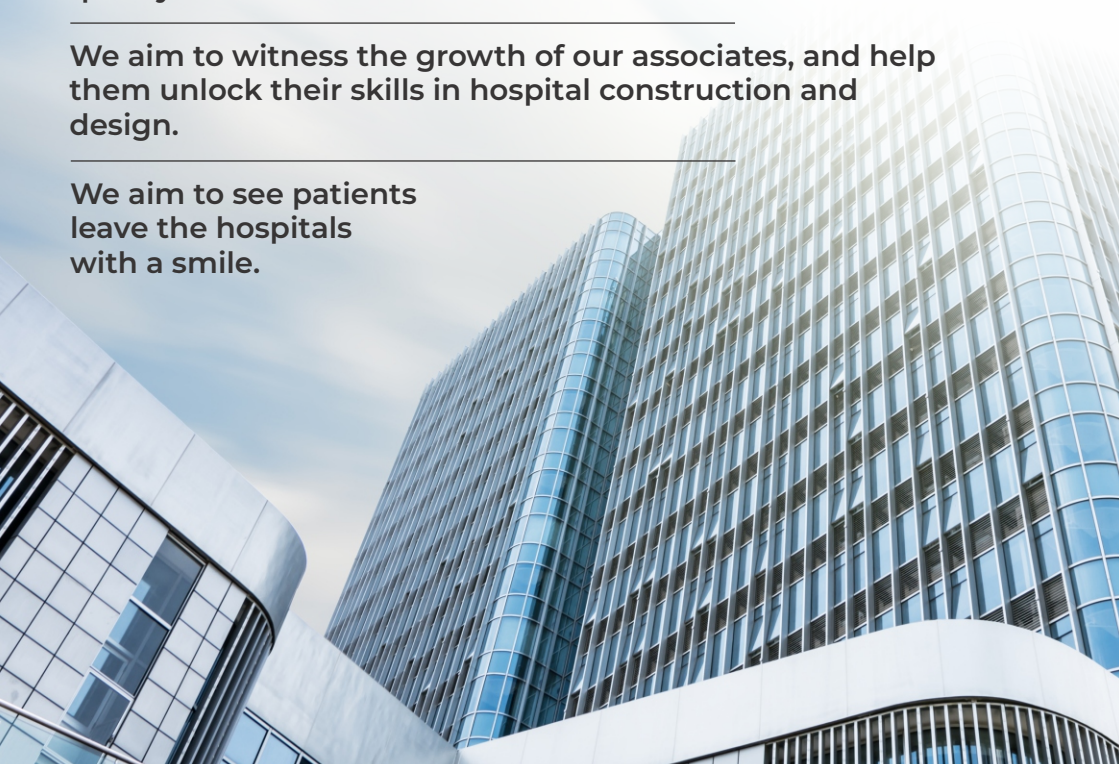

ARCHITECTS -THIS ONE'S FOR YOU!

To be an architect is, in itself, an honor. However, to be a healthcare architect catering to the infrastructure needs of hospitals, is one of the most noble things one could do with such knowledge. Can-Pro, the project development and management wing of Candour Solutions, with it's bank of domain experts, invites architects to join hands, and bring better support to healthcare institutions across India, for a better tomorrow.

We aim to help hospitals build better infrastructure, while adhering to respective quality standards.

We aim to witness the growth of our associates, and help them unlock their skills in hospital construction and design.

We aim to see patients leave the hospitals with a smile.

WHO WE ARE

As a unit born from a company that has years of experience in the healthcare industry, Can-Pro is set to revolutionize healthcare construction and design. We aim to collaborate with architects who have been unfortunate enough to not have showcased their skills in healthcare, through inputs from hospital quality management system experts, and provide them the golden opportunity to establish their names in the industry.

OUR SERVICES

Hospital Design

Design is step one of building a standardized, quality infrastructure. It is born from the joint vision of the management, as well as the design team and subject matter experts.

Hospital Layout and Construction

A hospital design is of no use if the layout and construction is sub-standard. This another core service of Can-Pro, which assists in new layout and construction, as well as renovation or re-location of existing units.

Hospital Maintenance

Maintenance is not just a department. It's a key quality indicator. A well-maintained building will undoubtedly withstand the test of time, as well as provide headroom for future changes that is inevitable at the rate of technical advancements we observe today.
